Subject: GLYPHOSATE NSRL
Date: Tuesday, June 13, 2017 6:03:22 PM

Glyphosate has been shown to be a neurotoxin, endocrine disruptor, mineral chelator, antibiotic, and carcinogen, which also causes liver disease. Because no comprehensive, long-term, independent study has ever been done that shows real life exposure levels for glyphosate, the safe level of glyphosate exposure on a daily basis is currently ZERO.

Thank you,
Heather W.
